

Soil Health & Crop Recommendation Report

Report Date: November 17, 2025 at 09:35:20 UTC

Farmer Information	
Name:	guru
Phone:	7795344829
Location:	Vijayapura, Vijayapura taluk
Land Size:	1.00 acres

Parameter	Value	Unit
Nitrogen (N)	50.0	mg/kg
Phosphorus (P)	53.0	mg/kg
Potassium (K)	50.0	mg/kg
pH Level	6.50	
Temperature	26.5	°C
Humidity	60.0	%
Rainfall	609.0	mm
Soil Type	Black Soil	

Soil Health Assessment

Overall Soil Health Score	91.0/100	Excellent	
---------------------------	----------	-----------	---

Component	Score	Points
Nitrogen	15.0	points
Phosphorus	12.0	points
Potassium	13.0	points
Ph	20.0	points
Nutrient Balance	9.0	points
Temperature	5.0	points
Humidity	5.0	points
Rainfall	3.0	points

Soil Type	9.0	points
-----------	-----	--------

Weather Suitability for Pigeonpeas

Overall Suitability Score: 10.0/10 ■ Excellent

Weather conditions are excellent for this crop

- ✓ Temperature 26.5°C is ideal for pigeonpeas
- ✓ Humidity 60.0% is ideal for pigeonpeas — reduces disease risk
- ✓ Rainfall 609 mm is sufficient for pigeonpeas

Recommended Crop

Predicted Crop	Pigeonpeas
Confidence Level	74.6%
Model Used	Stacking Classifier

Top 3 Alternative Crop Options

Rank	Crop	Confidence (%)
1	Rice	7.7%
2	Jute	1.5%

Soil NPK Levels Visualization

Soil NPK Levels vs Ideal Ranges

Rainfall Analysis

Rainfall Analysis for Pigeonpeas

Warnings & Observations

Positive Indicators:

- ✓ Nitrogen level optimal
- ✓ Phosphorus level optimal
- ✓ Potassium level optimal
- ✓ pH optimal (6.5)
- ✓ Soil type: Black Soil

Soil Treatment Recommendations

- Soil pH (6.5) is within optimal range (6.0-7.5) for pigeonpeas.
- Nitrogen (50.0 mg/kg) is excessive for pigeonpeas. Optimal range: 10-30. Reduce nitrogen application to avoid excessive vegetative growth.
- Phosphorus (53.0 mg/kg) is within optimal range for pigeonpeas.
- Potassium (50.0 mg/kg) is excessive for pigeonpeas. Optimal range: 10-30. High K can cause magnesium deficiency.
- High clay content, retains moisture well. Ideal for cotton, wheat, and pulses.

■ Fertilizer Recommendations

FARM DETAILS

Land Size: 1.0 acres

Current Soil NPK: N=50.0 | P=53.0 | K=50.0 mg/kg

Optimal NPK for pigeonpeas: N=20 | P=50 | K=20 kg/acre

SOIL NUTRIENT STATUS

- ✓ Excellent: Soil NPK levels are already optimal for pigeonpeas

Maintain soil health through:

- Regular organic compost application
- Crop rotation practices
- Green manuring between seasons

ORGANIC & BIO-FERTILIZER ALTERNATIVES

Farm Yard Manure (FYM): 5-10 tons

- Application: 5-10 tons/acre (provides balanced NPK)

Compost: Well-decomposed organic compost

- Application: 3-5 tons total

Green Manure: Dhaincha, Sunhemp, or other leguminous crops

- Benefits: Natural nitrogen fixation, improves soil structure

Bio-Fertilizers:

- Rhizobium: 200g/acre (for nitrogen fixation)
- PSB (Phosphate Solubilizing Bacteria): 200g/acre
- Azospirillum: 200g/acre (for nitrogen fixation)
- VAM (Vesicular Arbuscular Mycorrhiza): Enhances P uptake

Note: Apply fertilizers based on soil test results and local agricultural extension recommendations for best results.

■ Crop-Specific Tips for Pigeonpeas

Drought-tolerant legume. Requires well-drained soil and warm climate.

■ Additional Notes & Disclaimer

- These recommendations are based on comprehensive soil analysis and advanced ML predictions.
- Actual results may vary based on local conditions, weather patterns, and farming practices.
- Consult with local agricultural experts before making major farming decisions.
- Regular soil testing (every 2-3 years) is recommended for optimal crop management.
- Consider crop rotation and organic farming practices for long-term soil health.
- Monitor weather forecasts and adjust irrigation schedules accordingly.
